

Tapped Photo Detector(Tap-PD)

The Tap-PD is an optical power-monitoring device that integrates a micro-optic tap coupler and high-sensitivity photodiode in a compact package. It features excellent optical and electrical properties such as a broad wavelength range, low insertion loss and high responsivity.

Features

- Compact package
- Custom Tap ratio available
- Broad spectral bandwidth
- Low WDL and PDL

Applications

- Gain monitoring for amplifier
- Power monitoring in DWDM system
- Add/Drop monitoring
- Power monitoring in Optical interface module

Ordering Information
